Response to Amendment

The following is in response to the amendment filed on July 14, 2003.

Claims 1, 2, 5-7, 9-12, 15, and 16 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Claims 1, 2, 7, 11, and 12 are allowed primarily because the shoe press belt of the present invention has a web side layer composed of a single hydrophobic high molecular weight elastic material and a water holding section formed in the web facing surface. With respect to Applicant's arguments, there is no teaching of making a shoe press belt with a web facing side and a water holding section formed therein rendered hydrophobic by means of a single elastic material.

Claims 5, 6, 9, 10, 15, and 16 are allowed primarily because the shoe press belt has a hydrophilic web facing surface and has a water holding section formed in the web side layer with at least some of the interior surfaces of the water holding section being hydrophobic.

Prior art grooved shoe press belts arranged to receive water from a press felt do not have hydrophobic water holding sections formed within a web side resin layer.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kiuchi (US 4,559,258) discloses a shoe press belt having a shoe-side inner resin layer comprising polytetrafluoroethylene for reduced friction against the shoe.
